## Safety Cover Padding

Extends the life of your pool cover by creating a barrier between the cover and deck to prevent chafing. Fits all mesh or solid safety covers. Installs in minutes. Available at all locations.

## Tips for Closing Your Pool

This has been a great summer to own a pool but now that school is back in session and our colder weather will be approaching, you will want to start preparing to winterize your swimming pool. We recommend waiting to close the pool until the temperature in the pool drops below 60 degrees.

Closing your pool properly and keeping it as clean as possible can save you a lot of work and money when it comes time to open the pool for the summer season. Here are a few simple steps to follow to protect your pool during the winter months and make it easy to open when the warm weather returns.

1. **Clean your pool.** Make sure you brush and clean the walls using *Off the Wall*. Vacuum the pool to remove all the debris.
2. **Clean your filter.** If you have a sand or DE filter use a good filter cleaner like *Strip Kwik* to clean oils and scale from the filter bed or grids.
3. **Balance your pool water.** Proper water balance is always important but often something people neglect to do when they close the pool for the winter. We recommend you bring a sample in for testing before putting the pool to bed because it's important to have the hardness in the proper range to prevent etching, scaling or deposits during the winter. It is also important that the pH and alkalinity be in balance to protect your pool surface and equipment.
4. **Add winter chemicals.** Add Artic Blue winter shock and Artic Blue Algae Protector. It is also helpful to add an enzyme product, like BioGuard Natural Result to protect against waterline buildup during the winter months and BioGuard Scale Inhibitor. Circulate for 24 hours.
5. **Lower the water level in the pool below the returns.** Unless your pool can circulate with the water level below the skimmer do not lower the level if temperatures are below freezing until the morning of the closing.
6. **Evacuate water from the lines and equipment.** Add rubber expansion plugs to prevent water from getting back into the lines. Cover pool.

\*Test the pool every couple of weeks until the pool freezes to make sure a chlorine residual is maintained. Add liquid chlorine as needed.

To schedule your  
pool closing  
please call:

1-800-876-4340

or

509-928-6585

The above pool was not winterized properly resulting in a cracked filter tank and plumbing lines.

## WHY Balance Your Pool Water Before Closing

It's important to balance your pool water before closing it for the winter months. Closing a pool with water that is out of balance can cause problems on the pool surface such as scaling, staining and etching.

Closing the pool with a low alkalinity can lead to highly corrosive water that can damage the pool surface and equipment. It can also lead to the pH changing rapidly in response to outside influences.

A high alkalinity can lead to the pH drifting up and the water having a tendency to form scale and become cloudy.

A pool that has a low pH is on the acidic side which can damage the plaster or can wrinkle or turn a liner brittle if left unattended. A low pH can also cause damage to any metals in the pool.

A low calcium hardness level in the water can result in etching of the pool surface, corrosion of metals, staining of surface walls and heater failure.

High calcium hardness can form scale on the pool surface making it rough and uneven. It can also clog filters and reduce the pools circulation due to scale forming in the plumbing lines.

## Should I use my Autocover as my Winter cover?

This is a common question we get from customers. In our area we have seen many customers forced to replace their autocover due to winter use. Often Mother Nature dumps several inches of rain or snow on us and the cover pump can not keep up it freezes causing cover tension failure. Although they're easy to use, you have a lot invested in your auto cover and it is a very costly repair when they fail.

Investing in a winter safety cover is an investment that can save you from finding your autocover in a condition like the pictures shown below.

## Common Causes for pH Change

1. Chemicals
  - A. Sodium Hypochlorite - Raises pH
  - B. Calcium Hypochlorite - Raises pH
  - C. Lithium Hypochlorite - Raises pH
  - D. Dichloro (Super Sol) - Nearly neutral
  - E. Trichloro (Tabs/Sticks) - Lowers pH
  - F. Bromine - Lowers pH
2. Source water
3. Fresh plaster raises pH
4. Dust & Acid rain normally lower pH
5. Swimmers & their wastes normally lower pH
6. Algae growth can change pH

# Hot Tub Cover Options

## Vinyl Hot Tub Covers

If your cover weighs about 200 lbs., making it difficult to use your tub, it's time for a new cover. The cover has lost its insulating value and is costing you more money on your energy bill.

If your cover puddles when it rains that normally means your cover has broken or bowed foam cores and you should replace the cover. Your cover is costing you money if heat is escaping through a torn hinge.

If your cover has a foul odor which makes enjoying your time in the hot tub less enjoyable, you need a new cover. A good cover makes a big difference in your hot tub experience.

Not all covers are made the same. We carry quality Sunstar covers. Give us a call or stop in today to order a replacement cover.

### Reasons to Insist on Sunstar

1. Steel Reinforcement for extra foam strength.
2. Tapered Foam Core.
3. Vapor Seal Wrap to help prevent mildew.
4. Exclusive GHSG Super Heat Seal Gasket.
5. Energy Efficient Virgin Foam Cores.
6. Triple Reinforced Tie-Down Straps.
7. Super Strength padded handles.
8. Double stitching on cover for extra strength.
9. 4 layers of vinyl in the Tough "n" Sturdy Hinge.
10. 28 Points of Internal Reinforcement.
11. Marine Grade Vinyl.
12. Full 3 Year Warranty on materials & workmanship.
13. UL classification with ASTM Safety Standard.

Give us a call to place your order.

**THE COVANA**

# Grill World

## Bake, Roast, Smoke & BBQ

The Big Green Egg is the most versatile and effective means of baking, roasting, barbecuing and smoking all kinds of foods. It's a smoker, a grill and an oven all in one and you can easily use it year round because the ceramic walls hold the heat and moisture extremely well. The walls retain, circulate and radiate heat evenly so you never need a rotisserie to get perfectly cooked meats. This insulating quality cooks foods with an amazingly small consumption of charcoal.

Your food will be juicier and more flavorful using the Egg, with little to no shrinkage. The Egg gives a natural and wholesome flavor to all your foods. When baking, you'll get a "brick oven" flavor and crust. You can cook a ham or turkey to perfection in just a few hours. Plus you can control the degree of smoked favor you want your meats to have. Enjoy just a hint of smoke or have your meats smoked through to the bone.

The Egg is safer to use than a metal grill because the ceramic does not become as hot on the surface, just warm to the touch.

The Eggs have a lifetime Ceramic warranty. You can sear your steaks or fish at 700 degrees or more. Smoke your roast or ham at 200 degrees or less. Your Egg will perform superbly at high and low temperatures and you will enjoy restaurant quality food year round from a grill that will last your lifetime!

### Grill Accessories
