Tips for Closing Your Pool

This has been a great summer to own a pool but now that school is back in session and our colder weather will be approaching, you will want to start preparing to winterize your swimming pool. We recommend waiting to close the pool until the temperature in the pool drops below 60 degrees.

Closing your pool properly and keeping it as clean as possible can save you a lot of work and money when it comes time to open the pool for the summer season. Here are a few simple steps to follow to protect your pool during the winter months and make it easy to open when the warm weather returns.

1. **Clean your pool.** Make sure you brush and clean the walls using *Off the Wall*. Vacuum the pool to remove all the debris.
 2. **Clean your filter.** If you have a sand or DE filter use a good filter cleaner like *Strip Kwik* to clean oils and scale from the filter bed or grids.
 3. **Balance your pool water.** Proper water balance is always important but often something people neglect to do when they close the pool for the winter. We recommend you bring a sample in for testing before putting the pool to bed because it's important to have the hardness in the proper range to prevent etching, scaling or deposits during the winter. It is also important that the pH and alkalinity be in balance to protect your pool surface and equipment.
 4. **Add winter chemicals.** Add Arctic Blue winter shock and Arctic Blue Algae Protector. It is also helpful to add an enzyme product, like BioGuard Natural Result to protect against waterline buildup during the winter months and BioGuard Scale Inhibitor. Circulate for 24 hours.
 5. **Lower the water level in the pool below the returns.** Unless your pool can circulate with the water level below the skimmer do not lower the level if temperatures are below freezing until the morning of the closing.
 6. **Evacuate water from the lines and equipment.** Add rubber expansion plugs to prevent water from getting back into the lines. Cover pool.
- *Test the pool every couple of weeks until the pool freezes to make sure a chlorine residual is maintained. Add liquid chlorine as needed.

When pool thaws in spring, test water for chlorine and add some liquid chlorine if needed. This will prevent algae and make opening the pool easier.

To schedule your
pool closing
please call:

1-800-876-4340

or

509-928-6585

The above pool was not winterized properly resulting in a cracked filter tank and plumbing lines.

WHY Balance Your Pool Water Before Closing

It's important to balance your pool water before closing it for the winter months. Closing a pool with water that is out of balance can cause problems on the pool surface such as scaling, staining and etching.

FREE Water Testing

Lay-away for Spring Installation

If you need a pool renovation, new liner, pool pump, filter, heat pump, automatic cleaner or any other large items for your pool, lock in 2016 pricing and be one of the first to get their project done and ready so your swimming season isn't interrupted next year. Make monthly payments during the fall/winter to help pay down your final balance so it isn't such a large chunk out of your wallet all at once upon completion of your project!

Solid Vinyl Series

Blue, Green, Gray or Tan

Should I use my Auto Cover as my Winter cover?

This is a common question we get from customers. In our area we have seen many customers forced to replace their auto cover due to winter use. Often Mother Nature dumps several inches of rain or snow on us. The cover pump can not keep up and it freezes causing cover tension failure. Although they're easy to use, you have a lot invested in your auto cover and it can be a very costly repair when they fail.

Investing in a winter safety cover is an investment that can save you from finding your auto cover in a condition like the pictures shown below.

Common Causes for pH Change

1. Chemicals
 - A. Sodium Hypochlorite - Raises pH
 - B. Calcium Hypochlorite - Raises pH
 - C. Lithium Hypochlorite - Raises pH
 - D. Dichloro (Super Sol) - Nearly neutral
 - E. Trichloro (Tabs/Sticks) - Lowers pH
 - F. Bromine - Lowers pH
2. Source water
3. Fresh plaster raises pH
4. Dust & Acid rain normally lower pH
5. Swimmers & their wastes normally lower pH
6. Algae growth can change pH

Hot Tub Cover Options

Vinyl Hot Tub Covers

If your cover weighs about 200 lbs., making it difficult to use your tub, it's time for a new cover. The cover has lost its insulating value and is costing you more money on your energy bill.

If your cover puddles when it rains that normally means your cover has broken or bowed foam cores and you should replace the cover. Your cover is costing you money if heat is escaping through a torn hinge.

If your cover has a foul odor which makes enjoying your time in the hot tub less enjoyable, you need a new cover. A good cover makes a big difference in your hot tub experience.

Not all covers are made the same. We carry quality Sunstar covers. Give us a call or stop in today to order a replacement cover.

Reasons to Insist on Sunstar

1. Steel Reinforcement for extra foam strength.
2. Tapered Foam Core.
3. Vapor Seal Wrap to help prevent mildew.
4. Exclusive GHSG Super Heat Seal Gasket.
5. Energy Efficient Virgin Foam Cores.
6. Triple Reinforced Tie-Down Straps.
7. Super Strength padded handles.
8. Double stitching on cover for extra strength.
9. 4 layers of vinyl in the Tough "n" Sturdy Hinge.
10. 28 Points of Internal Reinforcement.
11. Marine Grade Vinyl.
12. Full 3 Year Warranty on materials & workmanship.
13. UL classification with ASTM Safety Standard.

Give us a call to place your order.
