

MAINTAINING YOUR SPA USING OZONE

Ozone is a great oxidizer and a convenient addition to your spa. When using ozone please follow all directions on the other side with the exception of Daily Maintenance Care. Remember to periodically check your ozonator for proper operation.

DAILY MAINTENANCE CARE WITH OZONATORS

Ozone must be supplemented by the use of chlorine or bromine. Under normal conditions, a dosage of 1 teaspoon chlorine or 2 teaspoons bromine to 100 gallons of water 2 to 4 times a week will provide adequate protection from bacteria.

(Note: Do not use water clarifiers, other than **Sea-Klear**, in a spa treated by ozone, it may react with ozone causing a mineral drop out.)

FILL THE SPA

1. Fill spa with water from the garden hose. **DO NOT USE SOFT WATER** *Note (Run water through the hose for a moment before putting the hose in the spa.)
2. Add 1 capful of **Stain-N-Scale Control** per 100 gallons of water (as indicated on bottle).
3. Test and adjust pH.
1. Add chlorine or bromine, 2 teaspoons per 100 gallons (This is referred to as "Shocking").

DAILY MAINTENANCE CARE

Test your spa water for your chlorine or bromine level and your pH level.

RECOMMENDED LEVEL .5 - 2.0 ppm CHLORINE OR BROMINE.

If your chlorine or bromine level is below the recommended .5ppm to 2ppm, add granular chlorine or bromine concentrate to the filter compartment with the jets running. Adding chlorine or bromine after each spa use can help in preventing bacteria. If the chlorine or bromine level is below .5 shock the spa. ***NOTE: For spas with ozonators see other side for Daily Instructions.**

At this time you will also be checking your pH level.

Quality Products and Dependable Service Since 1976

Spokane, WA 99212
(509) 534-4833

Toll Free (800) 876-4340

RECOMMENDED pH RANGE 7.4 TO 7.6

If your pH is on the low (**acidic**) side, 7.3 or below, add pH INCREASER (**soda ash**). If your pH is on the high (**basic**) side, 7.7 or above, add pH DECREASER (**dry ash**).

WEEKLY MAINTENANCE CARE

When using your spa, there are going to be wastes such as oils, hair sprays, and perspiration that will be very hard for the filter to remove. To remove these things from the water you need to SHOCK or SUPER-CHLORINATE the spa. You can do this 2 different ways:

1. Use SPA SHOCK (non chlorine shock treatment).
2. SUPER-CHLORINATE using 4 times your normal amount of chlorine or granular bromine.

To protect your spa from surface staining or calcium build-up add a weekly dose of **STAIN-N-SCALE CONTROL** (per instructions).

Wipe water line to remove any oils or dirt on the spa surface.

MONTHLY MAINTENANCE CARE

Clean your filter with a good filter cleaner degreaser. It should be cleaned monthly even though it might look clean when you take it out of the spa. There are still body oils that we can not see that may inhibit the filter from working at full capacity and the spa may not heat without a clean filter.

PERIODIC MAINTENANCE CARE

The spa should be drained 3 to 4 times a year. At this time you can thoroughly clean the inside of the spa with **Spa Surface Cleaner**. When refilling be sure to follow above directions for filling the spa.

The spa cover should be cleaned 3 to 4 times a year with a spa cover cleaning chemical such as **MOONSHINE**, and heavy snow should be cleaned off regularly during the winter months. (**For TIP TOP covers please refer to your owner's manual**).

The wood skirting should be oiled twice yearly. POOL WORLD has matching stains for your spa's skirt.

***REFER TO YOUR HOT SPRING OWNER'S MANUAL FOR DETAILED INSTRUCTION.**
