

Water Care - EverFresh® System

EverFresh® Water Care System

Another great water care alternative is the EverFresh system. The EverFresh system combines the cleaning power of our FreshWater® III ozone system with several of our other FreshWater products to keep your water clean and crystal clear while reducing the need for chlorine or bromine.

FreshWater® III High Output Ozone System

Your Hot Spring spa comes standard with the FreshWater III high output ozone system, an essential part of the EverFresh water care system. It uses Corona Discharge cell technology to generate a high concentration of ozone that works to neutralize contaminants on contact and enhance water quality.

FreshWater_{Ag+}® Continuous Silver Ion Purifier

The FreshWater_{Ag+} continuous silver ion purifier further reduces the need for chlorine by introducing silver ions into the spa water that inhibit bacterial growth. Insert the cartridge into the filter of your Hot Spring spa, and the silver ions are released automatically – there's no

chance of under or over dosing. Simply replace the cartridge every three months.

MPS Chlorine-Free Oxidizer

This fast-acting formula attacks cell walls to refresh and brighten spa water. When used with the FreshWater_{Ag+} purifier, the MPS chlorine-free oxidizer helps activate the silver ions so they can do their job more quickly. Plus it's pH neutral, so it won't alter water chemistry.

MPScents Oxidizer

This non-chlorine oxidizer with aromatherapy keeps your water clean and creates an inviting and relaxing environment.

Choose from four stimulating scents – Citrus Blossom, Island Escape, Spring Shower, and Zen Garden.

MPS Tests Strips

Use these test strips to monitor your spa's MPS, pH, and alkalinity levels when using the MPS chlorine-free oxidizer as part of the EverFresh water care system.

Water Care Products

FreshWater® Water Care Products

With our FreshWater line of high quality water care products, you can easily keep your spa water clean, clear and ready to enjoy.

F R E S H W A T E R ®

Spa Care Starter Kit

A complete FreshWater spa care kit in one convenient box! The kit includes Concentrated Chlorinating Granules, MPS Oxidizer, pH Up, pH Down, Defoamer, Stain & Scale, 5-Way Test Strips, and a spa water maintenance & troubleshooting guide – everything you need to start enjoying your spa.

Concentrated Chlorinating Granules

This efficient sanitizer is popular because it is completely soluble and nearly pH neutral. It is available in a 14 oz or 1.75 lb. bottle, as well as a 4 lb. bucket.

5-Way Test Strips

Conveniently monitor the chlorine, bromine, pH, alkalinity and total hardness levels of your spa water with these easy to use test strips.

Calcium Hardness Increaser

Raise calcium levels in your spa's water when the hardness drops below the recommended levels.

pH/Alkalinity Up, pH/Alkalinity Down

Up prevents pH bounce and deterioration of spa surface and fittings from low total alkalinity, while Down decreases spa water pH.

Stain & Scale Defense

Prevents calcium build-up on spa surfaces and controls stain and scale formation.

Spa Shine

Reactive silicone protects, waterproofs and seals the spa shell to prevent fading and oxidation.
